

LE MINH QUANG

FRESHER SOFTWARE ENGINEER

PROFILE

Software Engineer specialized in **Full-stack Web** and **Mobile** with 1 year of experience. Expert in building **Web Management Systems**, modular **Super App** architectures using **C# (.NET)** and integrating **AI-driven** features. Proven track record in task estimation and **100% on-time delivery**.

EDUCATION

HO CHI MINH CITY UNIVERSITY OF
TECHNOLOGY - 2022 - 2026

- Information Technology
- GPA: 3.41 / 4.0

SKILLS

- Backend:** .NET Core, NextJS, RESTful API, SQL (PostgreSQL, MSSQL), NoSQL (MongoDB)
- Frontend:** React Native (Expo), Flutter, NextJS
- DevOps & Tools:** Git, Docker, CI/CD (GitHub Actions)
- AI & Data:** AI Integration & Prompt Engineering

CERTIFICATIONS

- English for IT 2
- JavaScript Essentials 1
- JavaScript Essentials 2

[Verify Certificate](#)

RESEARCH

- Frameworks & Tech:** SvelteKit, Encore, Flask, Scikit-learn (Gradient Boosting), K3S
- Focus:** Hybrid WebView Optimization, AI Matchmaking Logic, Super App Architecture.

WORK EXPERIENCE

Lightbase Mini App Management CMS

11/2025 - PRESENT

Software Developer - FPT IS

Description: A robust ecosystem designed for managing and deploying Mini Apps within a high-performance Super App shell, including a **centralized Web Management Platform**.

- Full-stack Admin Dashboard:** Architected and developed a comprehensive **Web Management System** with 4 core modules (Home, Test, Store, Profile) using **TypeScript** and modular components to streamline Mini App lifecycles.
- Lifecycle Dashboard:** Architected a 4-module management system (Home, Test, Store, Profile) using **TypeScript** and **modular components**.
- Backend & Sync Engine:** Engineered **Encore-based asynchronous distribution workflows** and storage systems for Mini App deployment.
- Security (RBAC):** Designed robust **Auth** and **Role-Based Access Control** layers to ensure system-wide **data integrity**.
- Hybrid Optimization:** Fine-tuned the **SvelteKit-React Native bridge** and **WebView performance** to achieve minimal latency.

GameNect - Social Network App for Gamers

9/2025 - 4/2026

Lead Developer (Graduation Project)

Description: A swipe-based social platform connecting gamers based on play styles and interests.

- Developed the end-to-end mobile application** using **Flutter**, implementing a smooth, gesture-driven UI and complex state management.
- AI Integration:** Engineered a Matchmaking System utilizing **Gradient Boosting** algorithms to process 40+ behavioral attributes, achieving a **94% Recall rate** in user connections.
- Implemented Real-time Features:** Integrated WebSockets for instant messaging and friend request systems to maximize user retention.

QConcert - Online Event Ticketing Platform

3/2025 - 10/2025

Full-stack Developer (Personal Project)

Description: A high-traffic online event ticketing platform for concerts, seminars, and workshops.

- Architecture:** Engineered a robust Full-stack system using **C# (.NET Core)** for Backend and **Next.js** for an SEO-optimized Frontend.
- System Design:** Designed user flows, authored PRDs, and developed a booking system with integrated payment and e-ticket confirmation.
- Performance:** Optimized UX/UI and system performance through rigorous testing, significantly improving booking speed and conversion rates.
